CRM Application for Banquet Hall Booking

📌 Project Overview:

- The CRM Application for Banquet Hall Booking is a Salesforce-based solution designed to streamline the process of managing banquet hall reservations, customer details, event scheduling, and payments. This application helps businesses efficiently handle bookings, avoid scheduling conflicts, and improve customer experience.

🎯 Objectives:

- Simplify banquet hall booking management
- Maintain centralized customer records
- Track event details and schedules
- Automate booking and approval processes
- Generate reports for business insights

🛠️ Technologies Used

- Salesforce Platform
- Apex (Backend Logic)
- Lightning App Builder
- Visualforce / Lightning Components
- SOQL (Salesforce Object Query Language)

📂 Key Features

👥 Customer Management

- ✓ Store and manage customer details
- ✓ Track booking history
- ✓ Maintain contact information

🏢 Hall Management

- ✓ Manage multiple banquet halls
- ✓ Store capacity, availability, and pricing details

📅 Booking System

- ✓ Create and manage bookings
- ✓ Avoid double bookings using validation rules
- ✓ Track booking status (Pending, Confirmed, Cancelled)

💰 Payment Tracking

- ✓ Record payment details
- ✓ Track pending and completed payments

📊 Reports & Dashboards

- ✓ Booking reports
- ✓ Revenue analysis
- ✓ Customer insights

🧱 Data Model (Objects)

Custom Objects:

- Customer__c – Stores customer information
- Hall__c – Contains banquet hall details
- Booking__c – Manages booking records
- Payment__c – Tracks payment details

⚙️ Implementation Steps

1. Create Custom Objects in Salesforce
2. Define fields and relationships between objects
3. Build Lightning App using App Manager
4. Create validation rules to prevent booking conflicts
5. Develop Apex classes and triggers (if needed)
6. Design UI using Lightning App Builder
7. Create reports and dashboards

🚀 How to Use

1. Login to Salesforce Org
2. Open the Banquet Hall Booking App
3. Add Customer Details
4. Create a Booking
5. Assign Hall and Date
6. Track Payment and Status
7. View Reports and Analytics

🔒 Security Features

- Role-based access control
- Object-level and field-level security
- Validation rules for data integrity

📈 Future Enhancements

- Online booking integration
- Email/SMS notifications
- Mobile app support
- AI-based booking recommendations

🤝 Contribution

Contributions are welcome! Feel free to fork the repository and submit pull requests.
